

MAIA Monitor Riser

The MAIA Monitor Riser is a versatile desktop accessory that is able to meet monitor elevation requirements for the majority of seated applications. Segmented modular legs can be configured to elevate the sturdy plastic platform to 1", 2", 3" or 4" above the desk surface and are equipped with non-skid rubber feet. The upper platform offers a large surface area over 13" x 13" square, sufficient to provide support for most flat panel monitors up to 24" diagonal. The rear of the platform is also equipped with dual cable manager slots to keep cables neatly secured.

Specifications:

Platform Dimensions: 13.125" W x 13.5" D (33.5 x 34.5 cm)

Elevation Heights: 1", 2", 3" or 4" (2.5, 5.1, 7.6, or 10.2 cm)

Assembly: Assembly of the MAIA Monitor Riser is tool-free and takes about 2 minutes. Simply assemble the appropriate combination of leg segments, attach the segments to the platform, add the rubber feet and place the completed platform on the desk.
