

EQUESTRY Saddle Seat

The EQUESTRY Saddle Seat from ErgoVerse positions the user in an upright stance that is known to encourage upper body movement and deeper breathing. Together these have the potential to improve overall circulation and increase alertness. The upright stance also naturally realigns the spine and reduces the potential for lower back pain which is often associated with extended sitting. In addition it provides you with a noticeably extended reach or "Comfort Zone" which reduces the risk of over-reaching.

The EQUESTRY Saddle Seat comes equipped with casters which lock when weight is lowered onto them, meaning that the chair does not move once seated. This makes this an ideal chair for those performing tasks which require fine control but a full range of movement. The full 360° of free rotation enables you to easily align to equipment or reach other work areas as needed.

The gas lift provides a seat height anywhere between 22" to 27.6" and the seat also has the option of forward tilt up to 15°. This tilted seat position rotates the pelvis further forward, encouraging a more natural alignment of the back. Some users may also find this additional tilt more comfortable. Since the casters lock when weight is put on the chair, shorter users may be able to employ the tilting option in order to use this stool as a leaning solution when they need to move between locations and don't want to go into a fully seated stance.

Part #	Seat Material	Seat Height	Back Rest	Color
ESS-11215	Leatherette over PU Foam	22.0" - 27.6"	NO	Black

The EQUESTRY Saddle Seat comes with a 5 year limited warranty against defects in materials and workmanship under normal use and service.
