

# PROXIMA

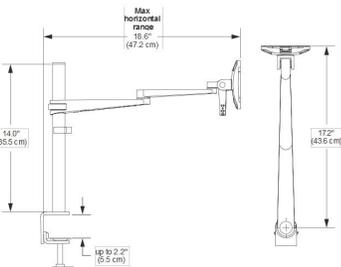

## Lateral Monitor Arm

The PROXIMA Lateral Monitor Arm is a modern, stylish monitor arm that will complement any office. Once installed, the monitor is suspended above the work surface with effortless repositioning capabilities to bring the monitor towards you or store it against the pole. The monitor can be elevated up to 15.5" from desk to mid-monitor, and the height is easily and quickly adjusted with the release on the pole. The Quick-Release Adapter makes swapping out monitors fast and easy when needed. The monitor tilter offers the versatility of tilting 90° up, 20° down from center, or pivoting from landscape to portrait orientation. The sleek cable management system routes cable beneath the monitor arm, and keeps your wires neatly clipped around the pole mount. The PROXIMA includes hardware for both desk clamp and grommet mounting. An optional thru-desk mount adapter accessory is also available. The PROXIMA Lateral Monitor Arm supports monitors from 1 to 20 lbs which are VESA compliant (75 mm / 100 mm adapters are included).

The small footprint of the PROXIMA Lateral Monitor Arm makes it ideal for usage on smaller desk surfaces, including Desktop Retrofits / Converters such as the CASSIOPEIA. Although the PROXIMA Lateral Monitor Arm is available only for single monitors, those who have two monitors (or more) can purchase additional units due to the affordability of the arm. This also provides users greater freedom of movement and placement of monitors.

Available in two colors: black (PMA-BLK) or silver (PMA-SIL).

Fully Storable	Cable Management	Range of Movement	Typical Deployment
