

STEPL Drafting Chair

The STEPL Drafting Chair is designed to provide an elevated seating solution, keeping you comfortable so your mind can focus on your work. The large, heavily padded seat and back rest will provide the support that you need throughout your day. Of course you can adjust the height of your STEPL to find the best fit for your work station needs but you can also adjust the angle of the seat (12° range) to optimize your comfort and reduce the risk of pressure points. The back rest also offers customizable settings, height adjustment for positioning it for optimum support and 22° of angle adjustment range for creating the ideal seating arrangement.

Both the full 360° footring models and the 120° footrest version are designed and built to handle heavy use. The sturdy oversized 27" chair base ensures that you are stable, even at greater elevations. The large diameter steel footing and footrest are both designed to offer firm support with aggressively treaded surfaces to ensure that your feet remain safely in place when on the chair. Because the footing and footrest are both height adjustable you can raise them to provide proper foot support to match your seat height. Many drafting chairs have only a thin ring to rest your foot on; both STEPL models feature more real estate for the foot to rest upon.

STEPL Drafting chairs are upholstered with supple imitation leather. Model 05004 is available in Black, 07033 is available in Anthracite Grey with red accent stitching, and 07030 is available in Black with red accent stitching.;

Part #	Seat & Back Material	Foot Support	Color
SDC-BLK-05004	Leatherette over PU Foam	360° Footrest	Black
