

CEPHEUS

Compact Desktop Sit-Stand Retrofit

The CEPHEUS Compact Desktop Sit-Stand Retrofit from ErgoVerse will retrofit any stationary desk into a sit-stand desk. These compact freestanding units require no modifications to the existing desk and can be set up in under 10 minutes. The CEPHEUS offers keyboard elevations from 0.75" to 15.75" above the mounting surface height. With a full 15" range, the CEPHEUS is able to meet the requirements of most users.

The CEPHEUS features a 17.5" base depth, facilitating deployment where most other products of this type are unable to fit, even

accommodating office desks as shallow as 18". The keyboard tray extends 6" beyond the base to provide users with sufficient viewing distance from the monitor and also moves them back for additional leg room. The 31.5" wide x 15.75" deep work surface will easily accommodate the widest of monitors and will also support dual monitors if the combined footprint of their bases does not exceed the width of the top. The 25.5" wide keyboard tray is 11.625" deep and will accommodate most standard keyboards and mousing solutions, including central pointing devices. The CEPHEUS offers infinitely variable keyboard height settings anywhere between 0.75 and 15.75" above the mounting surface. The worksurface is consistently positioned 4.75" above the chosen keyboard height setting.

The CEPHEUS employs an X-style mechanism that permits the keyboard and work surfaces to move straight up or down without forcing the user away from the desk when moving to a standing position. This means that it also works well in smaller work areas where the cantilever design common on many other sit-stand converters forces users to step away from the desk. The CEPHEUS is capable of supporting up to a combined 33 lbs (4.4 lbs on the keyboard tray). Height adjustment employs a lever-operated gas cylinder spring that minimizes the effort required from the user

Part #	Dimensions	Tray Dimensions	Adjustment Range
CCDSS	31" W x 24" D	25.5" W x 11.625" D	0.75" - 15.75" Above Desktop
