

# CORVUS Corner Converter

The CORVUS Corner Converter from Ergoverse will convert a right angled or tightly curved desk corner into a fully usable and accessible workspace. It slides over the existing work surface (up to 1.375" thick), bridging the corner and creating a comfortable diagonal corner that improves user comfort and improves the overall function of the workspace.

The CORVUS is designed to be a practical solution, creating a generous 21" diagonal bridged corner on any L-desk. The upper surface is a full 39" in width, more than enough space to accommodate a full-size keyboard with room to spare for a mouse, notepad or whatever is required. The simple rectangular shape means that devices or workspace accessories are evenly supported, with no limitations as to where they can be placed. The 13" depth ensures sufficient space for deploying a central pointing device with any keyboard, even split adjustable models.

The CORVUS Corner Converter is constructed of heavy gauge steel and is equipped with pads to protect the desk surface. It also has an adhesive strip to ensure that it does not shift position although in most cases the weight of the converter alone will keep it secured in place.

Part #	Dimensions	Bridging Distance
CCC	39" W x 13" D x 1.375" H	21"
