

Ring Pen Ultra

The Ring Pen Ultra from ErgoVerse restores writing comfort for those suffering from conditions such as arthritis which make it difficult to maintain a grip on a pen or pencil. The Ring Pen Ultra slides onto the index finger and, with the thumb and middle finger acting as stabilizing guides, provides full control for even fine movements.

The Ring Pen Ultra builds on the successful design of the earlier No-Grip Ring Pen by providing the same "gripless" functionality but now has the capability to accommodate virtually any writing, drawing, or eating utensil. Suitable devices can be easily inserted into the Ultra, creating "gripless" control that restores independence and dignity to those who might otherwise have extreme difficulty or be completely unable to perform these tasks.

While originally intended to serve the needs of those who may no longer be able to close their hand far enough or with enough strength to control writing utensils, the Ring Pen Ultra also offers any user the opportunity to work with a more relaxed hand, reducing the potential for the development of RSI related to the tight grip required to control most writing devices. As well, although designed for right-handed users the Ring Pen Ultra can also be used on the left hand. Left-handed use will offer a lesser degree of comfort and control but will still greatly reduce the grip force required to hold and control the attached device.

Part #	Description	Recommended User
RPU-S	Small, Yellow	Children or those with very small hands
RPU-M	Medium, Blue	Most women with average sized hands
RPU-L	Large, Black	Most men
